ATUL MISHRA

+91 9982862135 | mishraatul7305@gmail.com | linkedin.com/in/atul-mishra210202 | github.com/mishraatul7305

Interest & Skills

Programming & Tools: Python (Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, TensorFlow), Programming, SQL, Excel, Power BI, n8n, Google Sheets

Data & Analytics: Data Analysis, Statistical Modelling, Time Series Analysis, Mann–Kendall Trend Test, Z-test & P-value Analysis, Data Visualization, Forecasting

Automation & Development: Workflow Automation, API Integration, Structured Data Processing, File Handling, Inventory System Development

Experience & Project

1. Social Media Automation & Content Workflow using n8n

Dec 2025 – Mar 2026

- Built and automated social media tasks using n8n to cut down manual work.
- Connected Google Sheets, AI tools, and outside APIs to create and manage content automatically.
- Made workflows to find trending topics, create AI-based content ideas, and organize data on their own.
- Set up automatic alerts and workflow runs to boost productivity and make posting content easier.

2. Employee Management System – Excel

- Built an Excel-based system to organize and manage employee records.
- Used Excel formulas, data checks, sorting, filtering, and formatting to manage data well.
- Made summaries and reports to study employee information.

3. Billing System – C & Python

Dec 2025 – March 2026

- A console-based app that can add, view, update, and delete data, and manage files.
- Has two user types: Administrator and Customer.
- Uses structures to handle product and customer data easily.
- Works out the total amount and makes the invoice on its own.

4. Blinkit – Power BI Sales Performance Dashboard

May 2026

- Built an interactive Power BI dashboard to study Blinkit's sales performance and key numbers.
- Studied sales, revenue, product types, store performance, and customer trends using visuals.
- Used Power Query and DAX to clean, change, and calculate key data.
- Made interactive charts and filters to support decisions based on data.

5. DATA-ANALYSIS-USING-PANDAS

- This project studies student marks using Python and Pandas.
- It includes cleaning data, statistical study, and visuals to understand student performance.

6. N8N--AI-Email-Auto-Reply-System

- Built an AI-based email workflow using n8n to read incoming emails and send automatic AI replies.
- Connected Gmail API and OpenAI API to make email handling and replies faster.

7. Student-Marks-Data-Analysis-using-Pandas

July 2026

- Studied student marks data using Pandas to clean, process, and explore the data.
- Made visuals using Matplotlib and Seaborn to find performance patterns and gain insights.

Technologies Used: n8n, Google Sheets, AI Content Tools, Web Search Automation
Key Concepts: Workflow Automation, API Integration, Content Scheduling, External Triggers, Structured Data Generation

- Built and set up automated social media workflows using n8n, connecting manual and outside triggers (Google and location-based search) to gather trending topics and research ideas.
- Connected AI tools to create content ideas and post drafts, making a smooth pipeline for research and content creation.
- Automated data storage, tracking, and scheduling using Google Sheets to manage posts well.
- Built a semi-automatic posting system with manual approval, improving content quality and cutting manual work through set automation.

Climate Change Impacts on Hydrologic Extremes – Rainfall Trend Analysis *July 2025 – Jan 2026*

Technologies Used: Python, Excel

Key Concepts: Time-Series Analysis, Mann–Kendall Trend Test, Z-test & P-value Analysis, Seasonal aggregation

- Gathered and studied long-term rainfall data from the India Meteorological Department.
- Changed daily rainfall data into monthly, quarterly, half-yearly, seasonal, and yearly time scales for multi-level trend study.
- Used methods like Mann–Kendall test, Z-test, and P-value study to find clear rainfall trends.
- Did data cleaning, prep, and statistical work using Python and Excel.

Grocery Store Management System (C Language) *2023 July – March 2024*

Technologies Used: C Programming, File Handling, Structures, Arrays

Key Concepts: Inventory Management, Billing System, Data Persistence, Modular Programming

- Built a console-based system for stock and billing using C. Made Administrator and Customer parts for handling products, billing, cart, and invoices. Used file handling to store data and update stock. Used structures, arrays, and step-by-step programming to keep records and transactions correct.

Education

Bachelor of Technology (BTech) – Computer Science and Engineering Duration: 2024 – 2027
Goyal Institute of Engineering, Lucknow (Affiliated to AKTU) CGPA: 6.5

- Relevant Coursework: Data Structures & Algorithms, Machine Learning, Python Programming, Database Management Systems, Operating Systems
- Area of Interest: Artificial Intelligence, Data Science, Automation & Software Development

Diploma in Computer Science and Engineering Duration: 2021 – 2024
Khalsa College of Engineering & Technical Campus, Jalandhar, Punjab (Affiliated to PTU) CGPA: 6.4

- Relevant Coursework: Data Structures, C Programming, Python Programming, Database Management Systems, Computer Networks
- Area of Interest: Software Development, Data Science, Automation, Web Technologies

Secondary Education (Class X) Year of Completion: 2021
Army Public School, Jalandhar Percentage: 55%
